# Introduction

---

Since, last ten years we are working as the freelancer to provide the software solutions in the form of products & Services to our clients. During this period, we faced lots of difficulties to managing payment gateways for our products and services.

So, to achieve all these things we are created PayPage script. Using this script, you can manage the many payment gateways using one codebase. Also, you can use these payment gateways in shopping cart, Invoice billing, bill payments like other e-commerce website as per your convenience.

PayPage is a payment gateways integration script built in PHP. It provides a facility to integrate payment gateways like PayPal, Paytm, Instamojo, Paystack, Stripe, Razorpay, Iyzico, Authorize.Net, Bitpay, Mercado Pago, PayUmoney, Mollie, Ravepay and PagSeguro. It is the best solution to integrate these all-payment gateways in your PHP application in minimum time. It is a multi-payment gateway processing library that provides a simple and easy implementation to integrate payment gateways in your website. It provides flexibility to write code for given payment gateway integration from one place. You can easily test all payment gateways in test mode and production mode. Also, able to integrate this product in any PHP based website.

Now we see the all-payment gateways one by one which you able to integrate using this script.

## *PayPal Standard*
